Boat Dismantling Insight by Generating Environmental and Safety Training

The Boat DIGEST project aims to improve the Health, Safety and Environmental (HSE) standards of recreational craft dismantling practices.

It will address skill gaps, while at the same time raise the awareness of the recreational craft owners and professionals about the responsibilities and options they have, when it comes to dealing with the end-oflife of boats.

This will be achieved through transferring innovative products, tools and training from previous research activities into vocational education and training (VET) for those involved in the dismantling of recreational craft.

An awareness module will also provide "end-of-life guidance" for those who own recreational craft.

# How to participate?

- Workshops in different countries
- Filling in a brief questionnaire
- In a pilot training module
  [for recreational craft dismantlers]
- In a pilot awareness module

  [for recreational craft owners]
- Sharing your knowledge, providing key information to the project
